Information

Discs with cover caps GN 338 are suitable for use as gliding or non gliding feet on machinery.

The type with gliding cover cap (Type KS) is ideally suited as a protective top or side cover for difficult to glide mechanical devices such as highly sensitive equipment.

Furthermore this particular type can also be used as a shroud to cover fixing screws to satisfy the visual appearance.

Removal of the cover can be done by inserting a screwdriver in the gap on the edge.

Coloured cover caps are available on request.

Discs with cover caps GN 338 are only available in packs of 10 pieces.
