

## Latch clamps with safety locking mechanism

Latch clamps with safety locking mechanism

### New from Ganter in Furtwangen

Ganter, makers of standard elements, has enlarged its latch clamp product range with "Latch clamps with locking mechanism".

Every design features a locking mechanism which prevents the inadvertent or vibration-induced opening of the latch clamp. Naturally, the latch clamps are also designed for operation with one hand.

The handles have a red and oil-resistant plastic cap. All movable parts are lubricated with special grease.

The GN 853 latch clamps are ultimately made of burnished, case-hardened C 10 steel. Their tie rods are made of burnished steel grade St 32.

Ganter supplies the following design versions:

- Coding 1: without tie rod and latch bracket
- Coding 2: with tie rod and latch bracket

Next to the steel design, there is also a stainless steel variant where all sheet metal parts and the tie rod are made of rust-resistant stainless steel.

For very high retaining forces, Ganter's range includes the GN 852.1 latch clamps with locking mechanism. They are made of forged steel and chemically blackened precision-cast metal. The bearing bolts are made of hardened and polished steel. The latch brackets are included in the delivery.
