Gripping trays perfect in form

Easy, clean, quickly installed: with the new GN 731 series of handles, Ganter expands its extensive range of gripping elements. The attractively designed gripping trays are mounted by snap-in function.

Folding handles for assembly in doors, machines, containers or safety equipment are just some of the interesting standard elements in Ganter's range. It includes the GN 425.8 folding handle with powder-coated zinc die-cast handle with recessed tray and handles made of chromed steel or stainless steel, the GN 825.1 plastic folding handle with spring-loaded return and the GN 825.2 folding handle also made of polyamide whose handle drops down flush into a tray.

While all these elements are fixed with two or four screws, the new GN 731 gripping trays are mounted without screws with snap-in function. As there is no need to set drill holes, there is a clear time advantage when it comes to assembly, coupled with virtually unlimited options of use.

The new handle series made of glass-fibre-reinforced polyamide are available in different design variants which differ in terms of dimensions, shape and properties.

First, there are the attractive GN 731 gripping trays in the Ergostyle design – available in three sizes and in black-grey and white Cleanline versions. The slimmer GN 731.1 is offered in two sizes and three colours. Beside the standard design, both series are also made in self-extinguishing thermoplastic material on request.

Very similar to GN 731 in external appearance, GN 733 gripping trays differ by needing two screws covered by a small cap in six Ergostyle colours. The standard element, temperature-resistant up to 100°C, is fitted in return with an optional flap to close off the gripping tray (Type S).

Next come the GN 739, specially developed for sliding doors and therefore designed for bi-directional use. The gripping trays made of glass-fibre-reinforced polyamide are available in black-grey or in white Cleanline design.
